a. Luke Duke deposits \$2000 into a bank account that pays 5% interest compounded monthly. Find the balance in the account after 4 years.

Equation:

$$A = 2000 \left(1 + \frac{.05}{12}\right)^{12 \cdot 4}$$

$$A = \$2441.79$$

Equation:

$$y = P(1 + r)^t$$

$$y = 125,000(1 + .07)^5$$

$$\underline{\$175,318.97}$$

c. A certain radioactive element decays at a rate of 21% per month. If the starting amount was 32 ounces, how much will be left after 1 year? = 12 Mo.

Equation:

$$y = P(1 - r)^t$$

$$y = 32(1 - .21)^{12}$$

d. Michael is offered two jobs - Job A, which offers him a starting salary of \$20,000 a year with a 5% raise each year he works there and Job B, which offers him a starting salary of \$25,000, but on a 3% raise each year. Michael plans to work to work at the job for 7 years. Which job should he pick and why?
